Forum the CloudMakers.

Hamburg., 29.09.2013, 14:01 Time

USPA NEWS - At the 26 .09. 2013 was the Forum the CloudMakers at the Mövenpick Hotel in Hamburg. A look into the future. The demands on IT to rise steadily. Thus one comes to an effective cloud - solution today not over. Here, the not built in one day.

It is a gradual process, a profound impact on the entire IT infrastructure and especially the processes will have. COMPAREX shows off his extensive project experience with clients from the ÖD and industry, such as operational , operational processes and resources are adapted to the cloud, what the risks are and what their solutions. Is it virtualization or cloud computing? Most IT - infrastructure are historically strong and very heterogeneous.

Of course you want to build a cloud - use existing investment solution and replace it. Yet let cloud - solutions to any virtualized environment put? What milestones are useful to achieve these goals? COMPAREX provides answers to the burning questions . New convergent total systems “ Building Blocks“^[2], to reduce the complexity in the construction and operation of a larger cloud - infrastructure.

From FlexPod of about VSPEX to Vblock system from VCE : finely tuned server - network and storage systems can serve as a basis for cloud architecture. Integrated security , storage and backup & recovery solutions guarantee high availability and compliance with the agreed SLA `s - more efficient than individual components. COMPAREX represents the systems on their benefits. The aim of the cloud solution is automated and transparent provision of the requested services. But the settlement according to the needs and requirements of customers is a key element.

Implement these fundamental component in the cloud solution intelligently and efficiently, requires tact. COMPAREX shows how these requirements can be meet. Automation of routine tasks , more flexible use of resources, demand-oriented and fast deployment : These are all requirements that the IT department has to face today. The approach for this purpose must be not only effective, but now allow for future growth and a further change in the requirements. Without of course restrict the choice in applications, operating systems and hardware.

With the COMPAREX cloud computing principle, you have the ability to react quickly and flexibly to business inquiries to exploit underutilized resources for more important tasks : applications and virtual machines are deployed automatically and easy resources together in pools. The advantage to build a self-managed virtual infrastructure, which scores with greater efficiency and flexibility - and on top of that you save money. <http://www.cloudmacher.de/>
